

Mother Nature Festival Live Inc.

MISSION STATEMENT

"We've got to clear the air so we can see the sun,
then when Mother Nature smiles, we'll know we've won."

Lyrics from song, Mother Nature
Words and Music by Cecil Ray Fillingame Jr. and Gary Revel

In this new age, of clear and present danger of global warming and climate change, the urgency to take action, has never been so vital. The survival of humans, on planet Earth, depends on it. Never, in the history of mankind, has the evidence of catastrophic coming destruction been so evident. It is the mission of Mother Nature Festival Live Inc. to educate and inform everyone how to stop global warming, and inspire us to stop global warming. We are working for the benefit and betterment of all people, throughout the world, pursuing and accomplishing environmental goals that will stop global warming and turn climate change back to where it is safer for human habitation.

With the average worldwide temperature and sea level rising and the amount of CO₂ in the air relative to the Tipping Point along with the amount of fresh water from ice melting in the ocean waters, there is an urgent need for us all to get involved. One way we can do that is attend Mother Nature Festival events and get informed as to what is needed to help Mother Nature. Learning more about the laws of environmental protection, seeing what has been done so far and what we have to do to hold those accountable are practical steps to take. Information is POWER. The massive amounts of air and water pollution throughout the world has created an urgent need to enforce and/or change laws controlling quality standards of our environment at the local, state, national and worldwide levels.

We are seeing manifested changes in the physical characteristics and DNA of humans, plants, animals and even the flesh of fish, and in some places our rainwater, now has plastic in it. People have plastic in their bodies. Bee colonies around the world are being destroyed. Clearly, the reality is, we are on the precipice of disaster. We need a government that puts the value, of the quality of human life over money. We need to reach out to our federal and state legislators to ensure that they will make these critical changes. We must take action to save the habitat of all life on Earth.

Our Mission includes the following:

1. Raising awareness of the need of sustainable clean energy and educating through community awareness. Providing practical direction and support for those who are like-minded in wanting to help Mother Nature.
2. Lobbying on the political forefront and maintaining a social media presence for speaking out for better laws. Holding Corporate Companies, small businesses, and governments legally and socially responsible for the enforcement of the environmental protection laws that we have, that are meant to stop, prevent, and turn back the tide of global destruction.
3. Raising awareness about the toxic levels of chemicals, biproducts, and waste of corporations and laws that allow toxic waste or ingredients to be added to our environment, sold or added to processed food to be consumed by humans.
4. Lobbying to ban any chemicals and or substances found to pollute our environment in any way, cause cancer, genetic mutation, reproductive harm, and birth defects.
5. Community outreach and support for solving humanitarian, environmental, and societal problems, working with other nonprofit organizations. Raising awareness of new or changing environmental laws, publishing a social media Mother Nature

Report each year regarding standards, laws, changes and tracking companies to compare those that are not following the laws to other companies that take action on these issues

6. We intend to use our social media presence to publish ratings by Geographical location, Laws by location and the businesses to track how their environmental impact effects human health, economy, water, air and food quality compared to other Nations that have banned toxins. We will also award one individual, group, government, business, or agency that has made the biggest impact working towards environmental change.

By launching the Mother Nature Festival Live Inc. we are celebrating the goodness of our home planet and drawing a red line, saying, no more! We all bear responsibility for this world. We need to demand a nationwide change, in order to positively impact our world.

We are planning events of music, education, information and inspiration. In coming together with harmonious environmentally conscious celebrations, we hope to raise awareness to begin our passionate pursuit of healing not only the Earth, but all life on Earth. We are excited to participate in the detoxification of our lands, our air, our oceans and of course our bodies. Join us and let's all take action for the survival and prosperity of one another and the saving of our planet Earth from Global Warming.

There is a tipping point, when our love for our planet, will not be enough to stop the collapse of its human habitability. The time is now! We must get started and make sure we don't reach that tipping point, then it will be too late for us all. We want all people to begin making decisions with humanity at the forefront of their decision-making process, not the cost of their bottom-line, but the cost of LIFE! We must put the value of human existence on the pinnacle of our thoughts, plans, goals and ambitions! In other words, at the top of

our list of things to do. Let us all decide to do those things, to stop global warming, and make doing the best we can for Mother Nature today, and every day from now on.

By stopping global warming, we can turn climate change back. This will be the successful result of succeeding in our mission.
